

**It's the Pits**

**Make Pit Pumping Easier!**

**Questions**

1. Do you use a professional manure applicator to pump out your pits/lagoons?
2. Do you pump out your own pits/lagoons?
3. Do you, or they, have a hard time completely pumping out the pit?
4. To name a few, do your buildings, pits or lagoons have:
  - flies/maggots?      • crusting/solids?
  - gases/odors?      • foaming?

If you answered “yes” to three of the four questions above, ProfitPro can help you or your custom manure applicator make a difficult task easier.

By using the right product and services, we can help solve those problems. Team up with ProfitPro to use our Manure Management Service to:

- Improve the ease of handling and liquid manure application.
- Reduce the cost of manure extraction from the pit and handling solids.
- Improve the safety issues regarding lethal gas during the pumping process.
- Reduce or eliminate odor complaints during transport and application.
- Reduce concern for surface and ground water contamination liability.
- Improve application uniformity from start to finish.

**What is the Manure Management Service?**

The Manure Management Service (Manure Route) is an annual contract designed to manage your manure and remove the issues that confront producers on a daily basis.

The service cost is based on the amount of manure generated in a containment unit or operation. The technology includes manure bioaugmentation additives (Microbe-Lift® technology). The probiotic feed additive for hogs or dairy can also be added.

The Manure Management Service addresses real manure issues with real solutions.

- Better animal performance
- Reduced veterinary costs
- Facility & equipment longevity
- Improved workers’ environment
- Reduced utilities
- Fewer legal issues
- Reduced regulatory burden
- Improved neighbor relations
- Enhanced manure value
- Reclaimed pit/lagoon capacity
- Improved manure utilization
- Improved soil & plant health
- Enhanced crop value and lower inputs
- Better crop residue decomposition
- Less environmental concerns
- Carbon credit options
- Green environment approach
- Probiotic approach
- Enhanced feed value and quality

**Doug Rohlik**, custom manure applicator, will be one of the speakers on the **FREE Manure Management Teleconference** scheduled for November 4, 2010 from 8 to 9 pm CDT.

Doug, as a custom manure applicator, will share his experiences over the past five-years in handling difficult manure issues. He will talk about using the right products and services to help solve your manure problems, improve the ease of handling and safety issues, and reduce odor and gases, etc.

# Election Day is coming up You want change . . . We got it!

Team up with ProfitPro®. Get on our “Manure Route”  
and let us solve those pesky manure issues.

- ☑ Odor/Flies
- ☑ Solids/Crusting
- ☑ Foaming
- ☑ Loss of Pit Capacity
- ☑ Lethal Gases
- ☑ DDG Problems

## Question & Answer

### *Does the Microbe-Lift technology really work?*

Yes, the Microbe-Lift technology does work. It gets rid of crusting and solids from the top to bottom of the pits/lagoons. Also you'll see a reduction in odors (gases), flies and foaming. You will regain the pit capacity you may have lost to sludge buildup. The bioaugmented manure will be lower in salt content and you will experience improved agronomic performance.

“When I applied the Microbe-Lift technology to my pit, I noticed an increase of microbial activity. After a few months the pit was water top to bottom. I didn't know that manure could look like that.”

—East Central Iowa Hog Producer

## Added Value

### Manure Products

#### Microbe-Lift Technology:

- **Microbe-Lift/Hog or Dairy** contains Purple Sulfur and utilizes novel technology that enhances anaerobic function. It reduces surface and bottom solids, barn odors and enhances manure fertilizer value.
- **Microbe-Lift/SA** (Sludge Away) is formulated specifically for the removal of organic bottom or surface solids that are slow to degrade. SA is designed to be used with Microbe-Lift/Hog or Dairy.

#### Feed Additive:

- **MaxiPlex** is a natural additive for swine feed containing live microbial cells that become active in the digestive system of the pigs for better health.

#### Bioaugmented Manure:

- **NPF™** (Natural Plant Food) is made from the bioaugmentation of manure and used for soil and foliar applications. It delivers energy, nourishment and a healthy leaf surface for the crops throughout the growing season.
