

It's the Pits

The Value of the ProfitPro's "Manure Route" Service

Every pit and lagoon may have similar issues and conditions, but each has its own characteristics. With that in mind, a "one size fits all" approach may not always yield the best results when treating manure pits/lagoons. Each pit/lagoon is treated individually by researching the history, analyzing current conditions and then formulating a plan-of-action.

Benefits of the Manure Management Service

- Better time and risk management
- Reduces odors and sludge
- Regains pit/lagoon capacity
- Reduces lethal gases
- Reduces foaming
- Reduces salt content and improves agronomic response
- Reduced agitation requirements
- Improves nutrient uniformity in field applications from start to finish

SUCCESS STORIES

Charles Kollasch, Algona, IA

Before Charlie treated his manure lagoons with ProfitPro's manure bioaugmentation technology, his pits were completely crusted over. Although it didn't happen over night, he saw a significant reduction in crusting when he pumped out his pits at the end of the season. Another thing that impressed Charlie was the "amazing amount of activity," in reference to the increased biological activity. He saw the pit turn over with the bottom solids breaking apart and floating to the top. He even noticed a decrease in the foaming that has been plaguing some of his pits (see below).

Rich Bergstrom, Austin, MN

Rich has a 2,400-head barn with a pit that is split into two halves.

ProfitPro has been treating the east half for about nine months. A few things really stood out from his experience: 1) He noticed a reduction in the amount of flies from when he shut the curtains up last fall. 2) He smelled less ammonia from the treated side vs. the non treated side. 3) He also observed the uniformity of the field application with the treated manure in comparison to the untreated. His hauler uses GPS mapping, integrated with a flow meter, and the difference was easy to see. The treatment process liquified the manure from top to bottom, which resulted in more uniformity in the manure and application on the field.

Crusting/solids before product use

Reduced crusting/solids after product use

Ben Parrott (Manure Service Consultant), Carroll, IA

Ben noticed this past winter when he was treating the pits on his "Manure Route" that some of them were not reacting as expected. Being on-site on a regular basis enabled him to make the necessary adjustments to help turn the pits around. He observed that every pit has its own unique makeup; therefore, he was able to tailor the treatment for each specific pit. The significant reduction in solids, flies and odor translated into better working conditions and an overall healthier environment for grateful employees and neighbors..

Dr. Jim Ladlie will be one of the speakers on the **FREE Manure Management Teleconference** scheduled for **May 4, 2011** from 8 to 9 pm CDT on **"The "Manure Route:" Providing Solutions to Manure Management Issues**

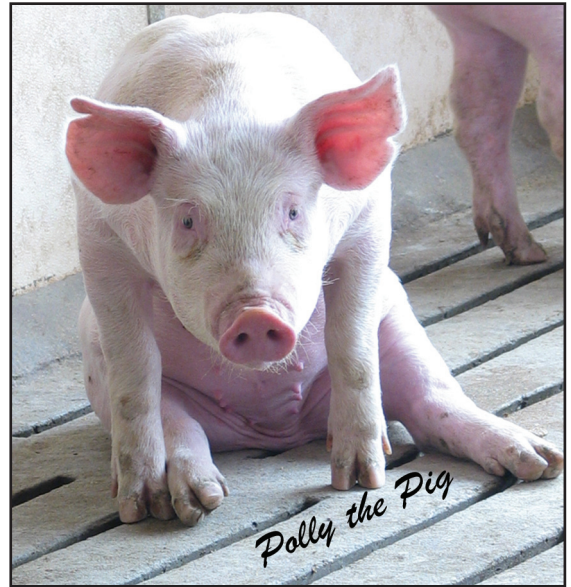

For more information, go to manure.profitproag.com. Dial the toll free number 1-866-225-3498 just before 8 p.m. (CDT) and enter the security code 7159 # (pound key).

Are *Your* Manure Pit Additives Sitting Down on the Job?

Polly the Pig reminds you to check out
ProfitPro's Manure Management Service

- ProfitPro will manage your manure on an annual basis through their "Manure Route."
- The key benefit to the producer is better time and risk management - let ProfitPro's Manure Management Service Representative take care of your manure issues and improve its agronomic value.

Question & Answer

What is ProfitPro's Manure Management Service?

ProfitPro, LLC offers a Manure Management Service (MMS) as part of the Full-Circle Animal, Manure and Soil-Plant System™. The MMS is an annual contract to manage the manure. The service cost is based on the amount of manure generated in a containment unit or operation.

ProfitPro uses a arsenal of proprietary technologies for proper bioaugmentation of manure. The service includes monthly scheduled on-site manure treatment, newsletter, free teleconference call, educational meetings and a manure management hotline.

Check-out **Manure Management Service** at manure.profitproag.com.
