

Do your horses's heels look like these?

Attack the "Heel Crack"!

Heel cracks are warning signs of **THRUSH** and should NOT exist.

A horse with a heel crack is incapable of 100% performance.

ALL NATURAL - SAFE - CLEAN - FAST - EASY

NO THRUSH®

First Ever **DRY** Formula!

NO THRUSH treats active thrush in days, firms up soft and tender frogs and is used for weekly **PROACTIVE** hoof maintenance!

Anaerobic bacteria hides in heel cracks (a deep opening in the sulcus between the heel bulbs) and are the primary reason horses suffer from recurring thrush. The tissue between a horse's heel bulbs is soft and pliable, which allows the thrush bacterium to burrow in and create a breeding ground that directly impacts the inner tissue of the foot.

The heel bulbs (intended by nature to be a unified pad) receive the brunt of the horse's weight with each step so when a "butt crack" is present, the bulbs "split apart," which affects stability.

Thrush is not "curable." Once a horse has thrush, it is susceptible forever.

Use **NO THRUSH** daily until resolved — then weekly for maintenance to stop the endless cycle of thrush!
